The ASF's Mission

The Apache Software Foundation (ASF) is a US 501(c)(3) charitable organization. Its mission is to provide Open Source software for the public good. We do this by providing services and support for

We do this by providing services and support for many like-minded software project communities of individuals who choose to join the ASF.

A neutral space in which projects which are independent from any corporate influence can prosper and create Open Source software for the public good. Under the business-friendly Apache License 2.0

https://www.apache.org/foundation/

The ASF is the Switzerland of Open Source

By popular demand (two people - that's about 100% of my readership!), here's an essay similar to my lightning talk of last week at ApacheCon: The Apache Software Foundation is the Switzerland of Open Source.

This is based on my rough notes and failing memory, so that won't be exactly the same thing.

CAT MYSE Bertrand Delacrée "résumé" will tell you The opinions expressed own, I'm not representing or company on this blog. YMN ON TWITT 11 Nobody can pull the plug..

Did you know that I am an ASF analyst? I didn't know either, found out last week at James Governor's great keynote. You had to be there ;-)

So, tongue firmly set in cheek, here we go!

PARIS OPEN SOURCE SUMMIT

Example: security at the ASF

------ Forwarded Message ------Subject: Command Injection through LDAP CSV export Date: Mon, 30 Nov 2015 00:12:52 +0500 From: xxx@gmail.com> To: security@apache.org

Hello there Apache team,

This is Whitehat and i would like to report a command injection vulnerability in the Apache <project> CSV export feature described in .apache.org/sproject>users-guide/tools_csvexport_wizard.html">https://sproject>.apache.org/sproject>users-guide/tools_csvexport_wizard.html

The "CSV export" feature of Apache Activity records that sends out does not properly "escape" fields. This allows malicious users to **turn the editable fields into active content** so when that when users downloads the ticket data csv and opens it, the **active content gets executed**.

PARIS

Mitigation

Ensure all fields are properly "escaped" before returning the CSV file to the user.

Dear Apache <project> PMC,

The attached security vulnerability report has been received by the **Apache Security Team** and is being passed to you for action.

Please take careful note of the following:

- This information is private and should be treated accordingly. The issue must not be discussed on a public mailing list, it must not be added to a public bug tracker, etc.
- The <project> PMC is responsible for resolving this issue. The security team is here to provide help and advice but the responsibility to do the work lies with the <project> PMC.

You may find the "ASF Project Security for Committers" [1] a useful reference. This e-mail represents step 3 of that process. Step 4 should be completed asap.

PARIS

Kind regards, Mark, for the Apache Security Team [1] http://www.apache.org/security/committers.html

ASF security process

Due diligence: your business - your responsibility ! Don't blame OSS for not doing *your* job... Read the OSS "fine print"...

Don't you love those security reports?
